In the claims:

1. (Thrice Amended) A compensating blister die cutter apparatus for cutting individual blisters from a sheet containing a plurality of blisters including a base member, at least first and second blister die cutter units supported by said base member, each said blister die cutter unit comprising

a support member containing a cavity to receive a blister on the sheet and also carrying a steel rule die,

a lost motion connection connecting said support member to said base member permitting relative lateral movement of each die cutter unit relative to said base member and relative to each other through a range of 360 degrees upon reception of the blister into the cavities in the support members.
